Abstract: This E poster presentation represents zoonotic diseases, especially (Leptospirosis). Zoonotic diseases are diseases are known as zoonoses. Leptospirosis is one of the diseases which is caused by *Leptospira interrogans*. It is a bacterial disease. It will sometimes affect the kidneys and lungs; it also leads to death and is also caused by different phases. It is caused by rats and rodents, mostly in both children and adults. It may take 7 to 12 days to cure. It has so many updates all over the world. It has so many symptoms like fever, chills, stomach pain, etc. It can be treated with penicillin, erythromycin, and some antibiotics also. It includes some of the graphical representation and some of the latest updates. Vaccines are there, but it is in limited amounts. Overall, I have concluded by saying that be safe and take care of your health not only in these particular diseases.

Keywords: zoonoses; *Leptospira interrogans*; rats and rodents; fever and chills; penicillin and erythromycin.
